

Table 9. Comparative Statistics for Case Fatality Rates for Abdominal Wounds by Number of Organs Injured

Number of Abdominal Organs Hit	KOREA		WORLD WAR II		Statistical Tests for Significance of Differences CHI SQUARE analyzed according to the number of abdominal organs injured gives: $X^2 (5) = 11.95$ $0.05 > P > 0.02$ Over-all statistics $\frac{X}{\text{S. D.}} = 4.35$ $P < 0.003$
	Operation to Injury (aver. of 7 hrs.)		Operation to Injury* (7 hrs. or less)		
	Total Wounded	Percentage Dying	Total Wounded	Percentage Dying	
0	36	2.80	98	5	
1	181	6.62	496	10	
2	102	6.82	402	24	
3	45	26.60	132	42	
4	12	58.30	41	54	
5	6	16.00	13	92	
6	2	50.00	3	100	
Total Average	384	10.68	1,185	20.51
