

FIG. 259.—Section from the edematous muscle around the fractured humerus. There is evidence of gross damage to the muscle due to trauma, massive hemorrhage with edema, and beginning gangrene of the muscles, which are infiltrated with blood. There are numerous small accumulations of edematous fluid throughout. Accession number 2891, Army Medical Museum. Negative number 45628. Hematoxylin and eosin stain; $\times 13$.
