

FIG. 28.—Bronchiole, showing purulent inflammation, proliferation of the basal layer and leucocytic infiltration. This is one of the larger bronchioles preceding the terminal divisions into the bronchioli respiratorii. Streptococci were present in the exudate in this bronchiole and Gram-negative bacilli in the peribronchiolar lesions of smaller size beyond it. Accession number 2694, Army Medical Museum. Negative number 46025. Hematoxylin and eosin stain; X 155
