

FIG. 168.—Exposure of medial portion of musculospiral nerve in the axilla and upper portion of the arm. Tendon of pectoralis major divided. Median and ulnar nerves with brachial artery, retracted medially, exposing musculospiral nerve and superior profunda artery, as they cross the tendon of the latissimus dorsi and long head of the triceps, entering their posterior humeral course. The branches of the medial portion of the musculospiral are shown springing from the medial aspect of the musculospiral trunk. A, Median nerve, outer and inner head; B, musculospiral nerve; C, axillary artery; D, pectoralis major, reflected; E, musculospiral medial branches; F, superior profunda artery; G, brachial artery; H, latissimus dorsi tendon; I, coracobrachialis; J, deltoid; K, Pectoralis minor tendon.
