

TABLE 94.—BLOOD SULFONAMIDE LEVELS IN 50 PATIENTS

Mode of Therapy	Number of Cases	Blood Sulfonamide Level mg. per 100 cc.		
		Minimum	Maximum	Mean
Dressing only . . . . .	12	0.2	* 2.4	1.4
Dressing and powder . . . . .	7	0.2	5.0	1.9
Dressing, powder, and 4 Gm. orally . .	12	0.2	9.7	2.5
Intraperitoneal . . . . .	5	3.8	27.0	12.2
Continued oral . . . . .	8	3.5	51.6	11.8
No history of therapy . . . . .	6	0.1	10.6	3.7

\* The maximum was actually 9.7 in one case, but this case is excluded from the average because the figure is completely out of line and it seems certain that the patient must have received oral sulfonamide medication which was not recorded.
