

THE MEDICAL JOURNAL

US Army Medical Center of Excellence

Call for Papers—Special Topic Issue

- **Description of Special Focus Issue:** *The Medical Journal* invites original submissions for consideration on all topics related to and exploring military veterinary medicine.
- **Potential Topics of Interest:** Manuscripts within the scope of this special topic include those addressing a range of subjects associated with veterinary medicine including but not limited to original research, analysis, treatment, organization, response, preparation, education, clinical/medical research, readiness, dentistry, historical reviews, etc. Papers may address virtually any important aspect related to veterinary medicine, to include discovery, prevention, ethics, policy, training, etc. Submissions should be original, unpublished, fully developed, focused, scholarly, and clearly presented.
- **Submission & Peer-Review Process:** Submissions must be vetted and peer-reviewed by authors' own organizations prior to submitting. Authors' internal vetting and peer-review should focus on content, merit, and accuracy. Authors must also have OPSEC/PAO approval for publication. Manuscripts within scope and quality standards will be considered for publication. Manuscripts out of scope for this special topic, but within the general scope for the journal, may be considered for general topic publication at another time. Submissions should adhere to manuscript guidelines, to include American Medical Association (AMA) style format. For more about the journal, submission requirements, and archives please visit <https://medcoe.army.mil/the-medical-journal>.
- **Point of Contact:** Please direct any questions regarding the special call for papers or regular submissions to usarmy.jbsa.medical-coe.list.amedd-journal@army.mil
- **Submission Deadline:** **EXTENDED to 31 December 2022.**

The Medical Journal, a quarterly, peer-reviewed, professional periodical with worldwide distribution, provides a forum for the presentation and exchange of current, high level healthcare, clinical, and medical research information, as well as medically related combat experiences and military doctrine development ideas and proposals. The journal encourages dialogue on important healthcare initiatives, seeks to expand knowledge of domestic and international military medical issues and technological advances, conveys clinical and health service support information, enhances the working relationships among the various medical corps and specialties, and promotes collaborative partnerships among the armed services.
